

**MARTIN  
BROS.**

In our continuous effort to protect our workers with the latest available solutions and technologies to combat any potential spread of COVID-19 on our jobsites, we successfully completed a test pilot of the #OTTOGEE IoT-enabled Connected Resources solution CoRe® at our Grand project in Los Angeles. This is a seamless technology to collect workforce management data across multiple metrics, to capture trends for social distancing and contact tracing between our team members who were in the test pilot. The test pilot ran for 8 weeks and we were able to see valuable data from our team members in the test pilot. The ease of deployment, the observed change in behavior, and the reliability of data have the capabilities of being game changers for the industry. Shout out to the #OTTOGEE team, keep up the great work!
